

Koji TAKEUCHI

National Institute of Advanced Industrial Science & Technology (AIST)

Dr. Koji Takeuchi has been engaged in the research of environmental protection at AIST since 1979, after studying analytical chemistry at Hokkaido University. His R&D activities covers various aspects in atmospheric environment, such as mechanism of atmospheric reactions, measurement of trace chemical species, and reduction of air pollutants. He has been developing air purification methods by photocatalysis, as well as standard test methods for photocatalytic materials. He is now principal reviewer, Evaluation Division, AIST, while serving as a visiting professor, Graduate school of natural science and technology, Kanazawa University (2001-), and convenor, ISO/TC 206/WG 9 (fine ceramics/photocatalysis)

(2006-).
